| From: Hughes, Scott Sent: Monday, August 27, 2018 12:10 PM To: Dean, Glenda Cc: Lutz, Daphne Y ; Cobb, Steve ; Rogers, Paul ; Springer, Grady Subject: NRC#1222639--Tanner Industries-- | | |
| Glenda, | | |
| Per our discussion in the staff meeting here is a copy of the NRC report and some initial info from Paul. Once on-scene we discovered that the released material is Ammonium Hydroxide. Apparently they use Anhydrous Ammonia to make that chemical. It appears that they have several large ASTs with the capacity to store around 80,000 gallons of either Anhydrous Ammonia or Ammonium Hydroxide and the release was a result of either an AST or the associated piping. | | |
| The site has been secured by HEPACO and it does not appear that any material made it to the Coosa River. As we discussed, the major focus now is on excavating the impacted soil. I will be tied up in the hearing room all afternoon so Paul will be your best point of contact if you need additional information. | | |

Cc: Hughes, Scott
Subject: Re: NRC#1222639

Yes, Mark Orr was in contact with them early this morning. They hired HEPACO, who discovered liquid anhydrous ammonia pooled in the woods between the facility and the Coosa River. Mark is on his way to the scene now and will keep me updated.

Paul
